Purpose of the Web Analytics Dashboard

The Web Analytics Dashboard provides an overview of usage of the WSIC Dashboards by GP Practice staff, and other clinical staff associated with GP practices, over the past six months.

Please note: the Web Analytics Dashboard does not track the viewing of different patients' records.

This may be used to answer, for example:

- Which members of staff are making most use of the Dashboards?
- Are the Dashboards being regularly used on Tuesdays in advance of Wednesday MDT meetings?
- Are staff members using the Patient Search to look up patients, or using Watch Lists as a start point to drill down for more detail?

Dashboard Usage | Network Activity

Use the Network Activity view to view various usage metrics for the WSIC Dashboards for users* associated with your GP Practice(s).

Displays **logins** & **view accesses** for each day over the selected time period. Hover over a bar for details

Displays **logins** and **view accesses** by user, ranked by total activity*. Click or hover on a bar to view more user details.

Click bars within either of these charts to highlight all activity of that user, or to reveal the link to 'view user summary'.

*Users may not appear in this Dashboard if their account has been disabled or they do not have permission to view the data of one of the selected GP practices.

Dashboard Usage | Network Activity (cont.)

Use the Network Activity view to view various usage metrics for the WSIC Dashboards for users associated with your GP Practice(s).

*Note that all charts will update to reflect the choice of filters.

Dashboard Usage | User Activity

Use the User Activity view to view various usage metrics for the WSIC Dashboards for a single user, who must be associated with your GP Practice(s).

Click the Home button to return to the Network Activity overview

Dashboard Usage | User activity

Monitor a single user's usage of the Care Professional Dashboard over time (max. last 6 months)

View time period

Last 180 days
